Search Hints

- Engenium's Semetric query engine is an advanced conceptual search engine, documents regardless of structure, content, or length. Semetric moves search keyword queries by inferring the meaning of words based on the context in w Not only are conceptual relationships measured between words, but also the document is considered to return the most relevant matches available.
- Queries to Semetric have neither a specific syntax nor reserved-word operators are one or more phrases or sentences that describe the desired concept. A siri an appropriate Semetric query. A phrase such as "semiconductor fabricati or "wireless interoperability specification" are better examples. To a poi provided descriptive information the better. A query could comprise an entire related technology, such as "A flip-chip technology, denominated as DDI Downset Flip-Chip) technology, is characterized by the forming of a d hole in the substrate, and by the use of an array of solder bumps over semiconductor chip and an array of recessed solder-bump pads of a tapered conical shape over the bottom surface of the device hole for l semiconductor chip to the substrate" (from US Patent #6,507,119).
- Note that while all documents are presented to the Semetric engine, at prese European documents are reliably indexed.
